seeryx

Prediction markets that trade like an exchange

A real order book, instant fills, no gas. Funds in native USDC in your own on-chain account on Solana.

SPORTS · ESPORTS · POLITICS · FINANCE · CRYPTO · STOCKS · CULTURE

Product overview · November 2026

WHAT IT IS

One account. Every kind of question.

A share pays $1 if the outcome happens and $0 if not, so 64¢ means the market sees a 64% chance. Sell any time before the close.

EVENTS

85

open questions: sports, esports, politics, finance, culture

CRYPTO ROUNDS

5m to 1 day

Bitcoin, Ether and BNB, up or down

STOCKS

11

stocks and ETFs in 15-minute rounds

LANGUAGES

7

EN, RU, UA, DE, FR, IT, ES

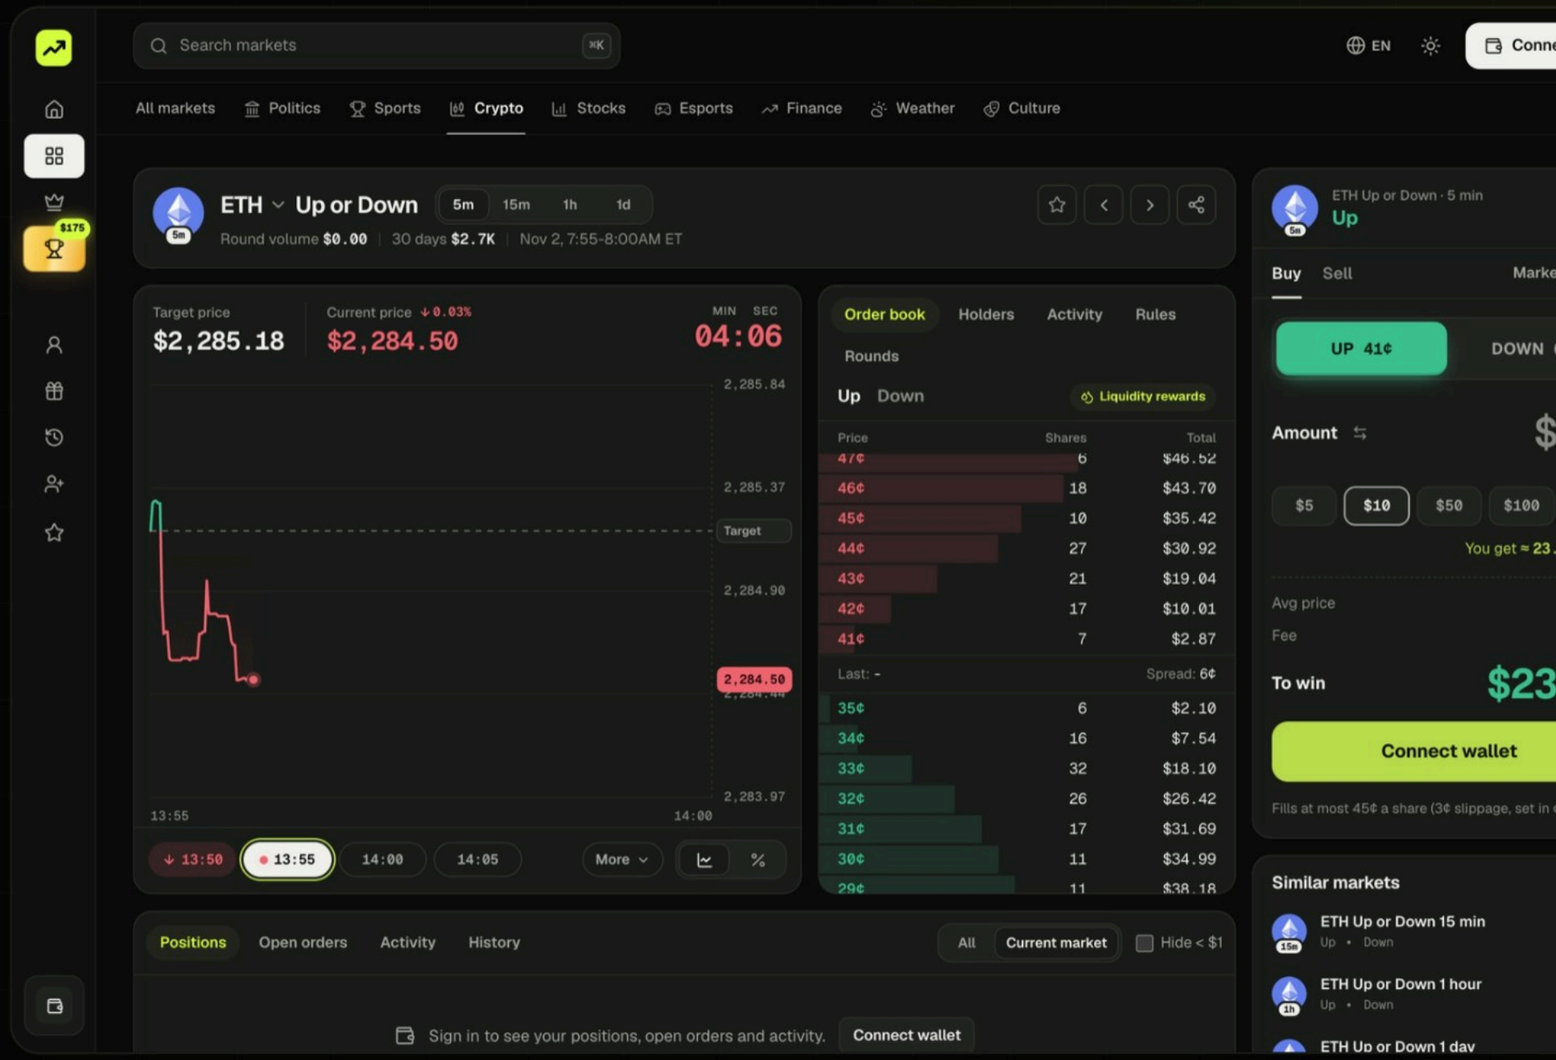

Live on seeryx.com · counts of November 2, 2026

THE TRADING SCREEN

Everything a trader expects from an exchange

- A central limit order book with live depth
- Market, limit and one-tap orders, post only, slippage control
- Split and merge, close one position or all of them
- Live chart, holders and every trade of the market

SPEED

Matched by our own engine, settled on Solana

Orders meet in a matching engine we wrote in Rust, the model professional exchanges use. Each fill then settles in the user's on-chain account, with no wallet window and no gas.

MATCH

0.5 ms

inside the engine

ORDER ACCEPTED

3.5 ms

median, p95 8.7 ms

SETTLEMENT

Solana

every fill goes on chain right after the match; live updates stream over WebSocket

Server-side timings from production telemetry on seeryx.com; network time to the user not included

NO FRICTION

Sign in, deposit, trade. Nothing in the way.

Any wallet, or email

Phantom, Solflare, Backpack, OKX, Trust and more, phone wallets included, or an email account with a passkey.

One approval a year

The wallet approves trading once per browser. After that every order goes through without a pop-up.

No gas, no SOL

Seeryx pays the Solana network fees for every deposit, trade and withdrawal.

Deposit from anywhere

USDC or USDT from ten networks or an exchange. It arrives as native USDC. Deposits are free.

Instant withdrawals

To your wallet in one transaction for $1, or free with a short delay. To other networks too.

Paid automatically

Winning shares pay out to your balance as soon as the market resolves.

— YOUR MONEY

Native USDC, in an account only you can withdraw from

A TYPICAL PREDICTION MARKET

Your balance	a wrapper token
↓ backed by	
Bridged token	USDC.e
↓ locked in	
Bridge contract	another chain

Each layer is one more contract that can fail or be frozen.

→

SEERYX

Your balance	native USDC · Circle

- Held in your own account in the Seeryx program on Solana, never in a shared hot wallet
- The program pays out only to your own wallet
- Every balance is public on chain and listed on DefiLlama

USDC mint EPjFWdd5…Dt1v · program 2uUbvYHq…aiv

SECURITY

Security is a process, not a slide

ON THE SITE

Only our own code runs

No third-party scripts under a strict content policy. Every transaction is decoded in the browser before the wallet signs; anything extra is refused.

AROUND THE CLOCK

Books checked against the chain

Every 5 minutes the exchange's balances are reconciled with Solana. Failed withdrawals, stuck settlements and outages alert the team at once.

EVERY RELEASE

Reviewed, scanned, attacked

Automated tests, static analysis and dependency audits on each change. After each release we try to break it ourselves.

A **SonarQube**: A in security, reliability and maintainability

DEPLOYS

Signed builds, manual approval

Builds are attested and checked on the server; nothing reaches mainnet without a person's approval. Secret scanning blocks leaked keys.

CUSTODY

Only the owner can withdraw

Our signing server pays fees and settles trades but cannot take funds. The trading key withdraws only to the owner's wallet. The upgrade key is offline; next, a time-locked multisig.

NEXT, FROM THIS ROUND

Independent audit

An outside audit of the Solana program and the funds layer, a time-locked multisig and a public bug bounty.

October 29, 2026: two large platforms were drained through a shared hot wallet and a third-party script. Neither path exists on Seeryx.

FAIR OUTCOMES

No Seeryx key decides who won

EVENT MARKETS

1. **UMA** takes the proposed result with a 500 USDC bond
2. **15 minutes** for anyone to dispute it, or UMA's vote decides
3. **Wormhole** guardians carry the settled result to Solana
4. **The Seeryx program** checks it and pays the winners

CRYPTO AND STOCK ROUNDS

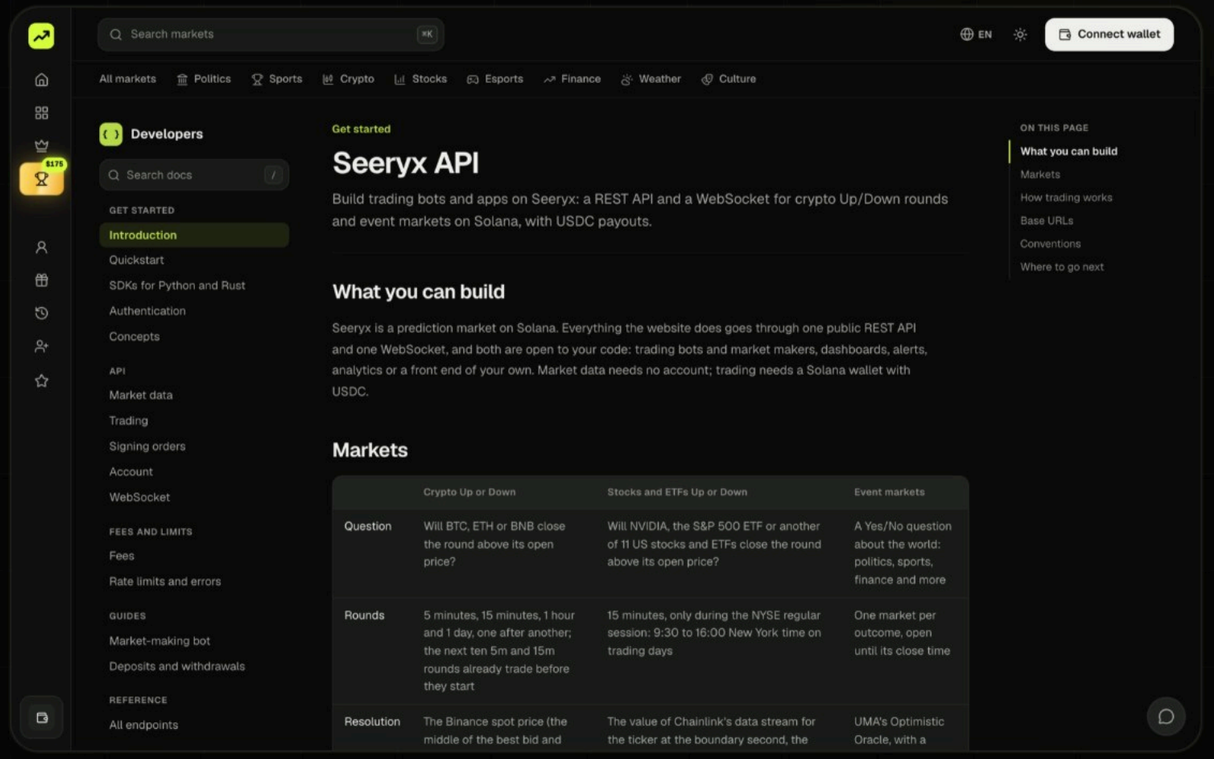

- Open and close at the exchange price of the boundary second: the Binance mid for crypto, the futures index for stocks
- A separate server checks every result with its own prices before it is signed
- An unchanged price is a tie and pays 50/50

Every step links to its transaction on the market's Rules tab

FOR BUILDERS

Open to bots and market makers

- Public REST API and WebSocket streams of books, trades and accounts
- Official Python and Rust SDKs
- Batch orders, cancel-and-replace in one call
- Liquidity rewards for quoting near the mid
- Sixteen pages of documentation with fee charts and examples

REWARDS

Traders who stay pay less and earn more

LEVEL	POINTS	FEE DISCOUNT	MAKER REBATE	FREE WITHDRAWALS
Bronze	0	–	20%	–
Silver	5,000	10%	25%	1 a week
Gold	20,000	20%	30%	3 a week
Diamond	100,000	35%	40%	unlimited

1 point per $1 traded, plus points for invites, streaks, quotes and resolved proposals

REFERRALS

20% of a friend's fees

The friend gets 10% back. Creators and communities: up to 40%.

WEEKLY TOURNAMENT

$175 every week

The week's top traders by volume share the pool, paid in USDC.

WHAT COMES NEXT

The product is live. Next we build on it.

LIVE

Exchange on mainnet

Events, crypto and stock rounds, rewards, API and SDKs.

LIVE

Open market data

Live odds, order books, trades and price history through the public API and WebSocket.

NEXT

Audit and multisig

Independent audit of the program and the funds layer; a time-locked multisig over upgrades.

NEXT

Widgets and sponsored markets

Embeddable odds for media and apps; brands and partners funding markets on their topics.
